Delivering Production Quality AI – Agentic Graph RAG and Context Engineering

- Extensive Context Engineering for production level Accuracy
- All forms of business information accessible through AI generated code and Queries
- Grounded and cost effective
- Widely used in business but only limited for textual content
- Real time and cost effective
- Does not hallucinate/Grounded
- Trained with Domain or specific use case
- Expensive & Slow
- Suffers from hallucinations
- Trained on External Data
- Very Slow and very expensive
- Suffers from hallucinations
- Limited use in Business and no understanding of business context

Open Book Approach

Closed Book Approach

Our Al Journey

Year	Key Milestones
Q1 2022	1st GenAl Project Initiated - Drug discovery use case for pharma leader using Graph RAG approach
Q4 2022	RAG + Graph RAG based implementations – Support bot for UN agency
Q1 2023	Launched Knowledge assistant platform for enterprises, Extensive Document processing using GenAI
Q2 2023	Launched Generative analytics platform for enterprises, implemented data bot for UN agency
Q3 2023	Cognitive process automation – Automated longtail debt collection for a leader in travel industry
Q3 2023	Architected Agentic Graph RAG based Solutions
Q4 2023	Launched KAPS – Generative AI adoption framework with Graph based context engineering for businesses
Q1 2024	Support bots for clients with multi-modal capabilities chat, voice, video
Q2 2024	GenAI driven Data solutions like MDM , Data migrations etc.
Q3 2024	E2E Agentic Migration for Cobol to Java – Implemented code migration assistant for Engineering leader
Q1 2025	50+ GenAI / Agentic AI projects delivered

Al Solutions, Strategy & Frameworks

KAPS: Our Generative AI Adoption framework

KAPS Framework systematically categorizes the business use cases into four specialized portfolios. These portfolios are supported with tailored architectural components, facilitating the seamless execution of diverse use cases with agility and efficiency

Knowledge Agents

The agents work with unstructured content to deliver use cases like:

- Conversational assistants
- Data extraction tools
- Document Generation
- Customer Support

Knowledge Analytics KAPS Orchestration Agent Process

Analytical Agents

The agents work with structured data and various databases to enable tools like:

- Data exploration tools
- Reports and dashboards
- Right Answers / DataBots

System Agents

The agents are trained on code base and SDLC artifacts to support SDLC activities like:

- Code Documentation & Migration
- Test Case Generation
- · Code scanning and auto fixing
- Support/Managed Services

Process Automation Agents

The agents are trained on cognitive tasks of the business processes to achieve:

- Cognitive Process automation
- Al driven process redesign
- Data Curation & Quality improvements

Our Solutions

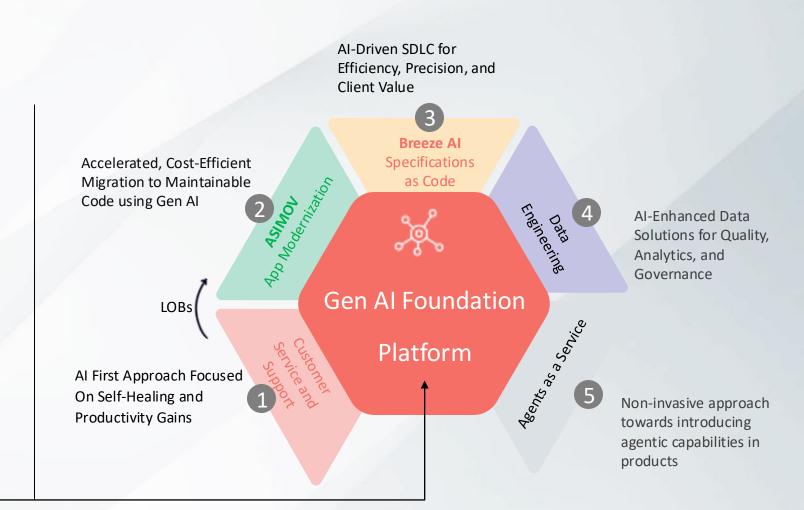

Transforming Business Lines Through Generative AI Leadership

Innovation-Driven R&D

Accelerators delivering speed, efficiency, and measurable business impact at scale.

KAPS: Accelerated AI Adoption Framework
Structured methodology to fast-track Generative
AI implementation enterprise-wide.

Gen Al In A Box: Secure, On-Premise Al Solutions Collaborations with Dell and Lenovo for scalable, secure, and cost-efficient deployments.

7

Gen AI in a Box Offering

For cost-efficient, high-throughput Generative AI deployments

Business Apps & Tech Blueprint:

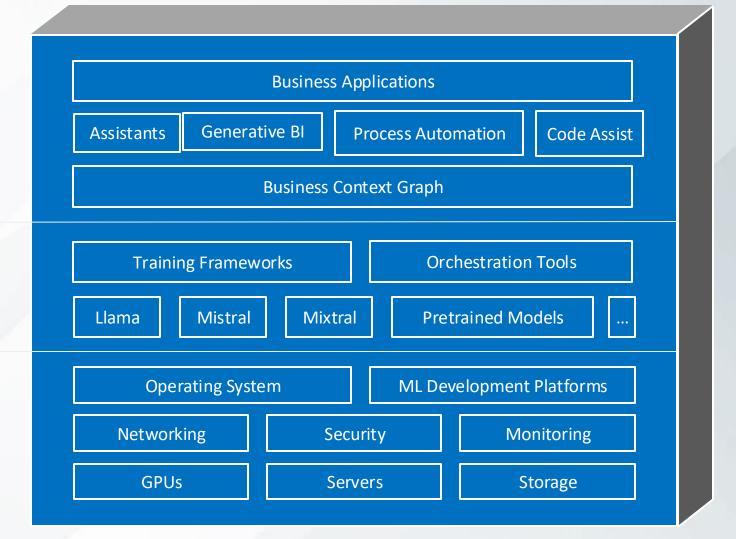

Ready-to-deploy applications, Gen AI implementation accelerators, and technology blueprints

LLM Infrastructure & Models:

LLM infrastructure and variety of open source and pretrained models

Hardware:

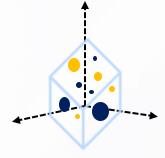

Optimized hardware for on-premise hosting available through partnership with Lenovo/Dell

Evolution of Agentic Graph RAG

Vector Search (RAG)

Find relevant documents and content for user queries.

Suffers with hallucination

Graph-RAG

Find entities associated to relevant content and patterns in connected data.

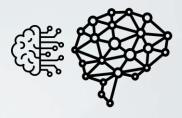

Vector Search

+

Knowledge Graph Retrieval

Improved Accuracy

Agentic Graph RAG

Build "agentic" apps leveraging LLM Function / Tool calling grounded by Knowledge Graph.

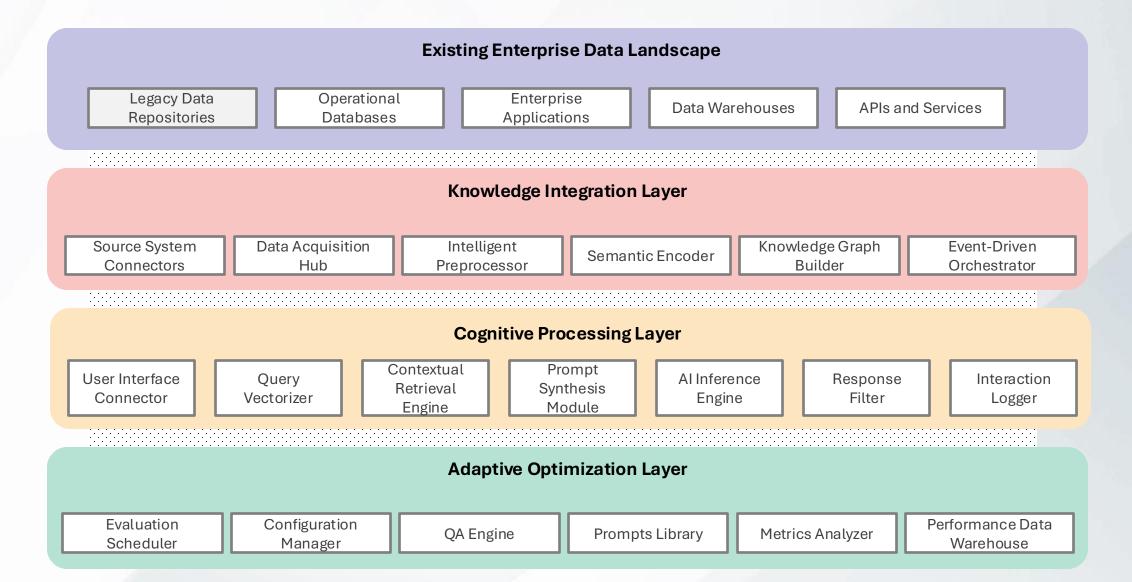

Leverage KG, graph algorithms and machine learning to discover new relationships, entities, and groups for advanced Graph-RAG.

Production Quality Solutions

Overview of Accion's Gen Al Blueprint

Proven and comprehensive blueprint for scalable Gen AI deployment in enterprises

10

Tech Stack

LLM Model

- o OpenAl Models
- o Anthropic Models
- o Gemini
- Llama
- Mistral
- Qwen
- Nvidia Nemotron

LLM Orchestration

- o Core LangChain
 - langchain
 - langchain-core
 - · langchain-community
 - langchain-experimental
- LangChain Integrations
 - · langchain-openai
 - langchain-anthropic
 - langchain-google-genai
 - langchain-neo4j
 - langchain-weaviate
- LangGraph
 - langgraph
 - langsmith (monitoring)
 - langserve (deployment)

Databases

Graph Database

- Neo4j Vector Index
- APOC procedures
- Graph Data Science Library

Vector DB

- Weaviate
 - weaviate-client
 - Weaviate Cloud Service (WCS)
 - Docker deployment
 - · Kubernetes deployment

PostgreSQL with Vector

Other Vector DBs

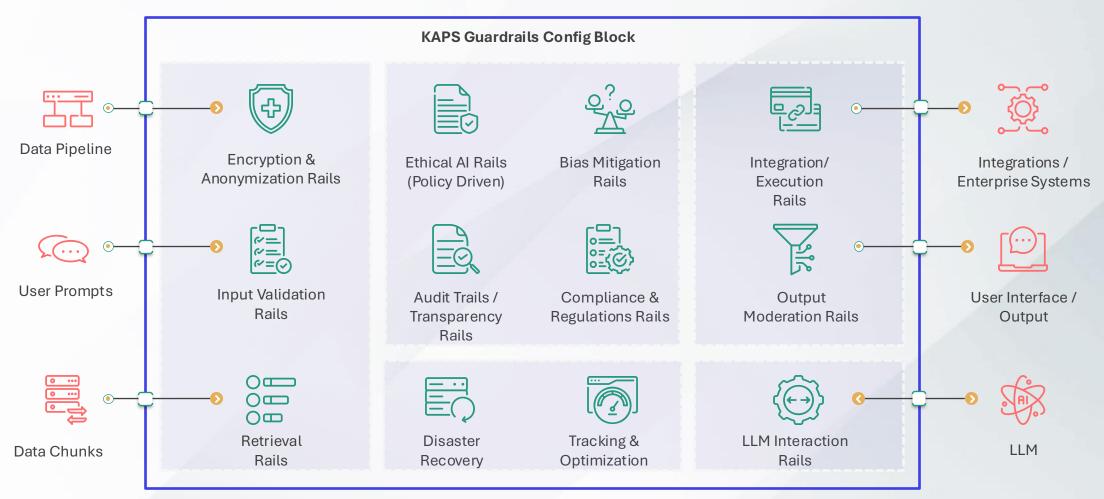

- Pinecone
 - pinecone-client
- Qdrant
 - qdrant-client
- Chroma
 - chromadb

ML Ops

- Model Deployment
 - Docker
- Docker containers
- o Docker Compose
 - Kubernetes
- K8s manifests
- AWS SageMaker
- o Google Vertex Al
- o Azure ML
- Monitoring & Observability
 - LangSmith (LangChain monitoring)
 - MLflow

Strategic Guardrails Framework

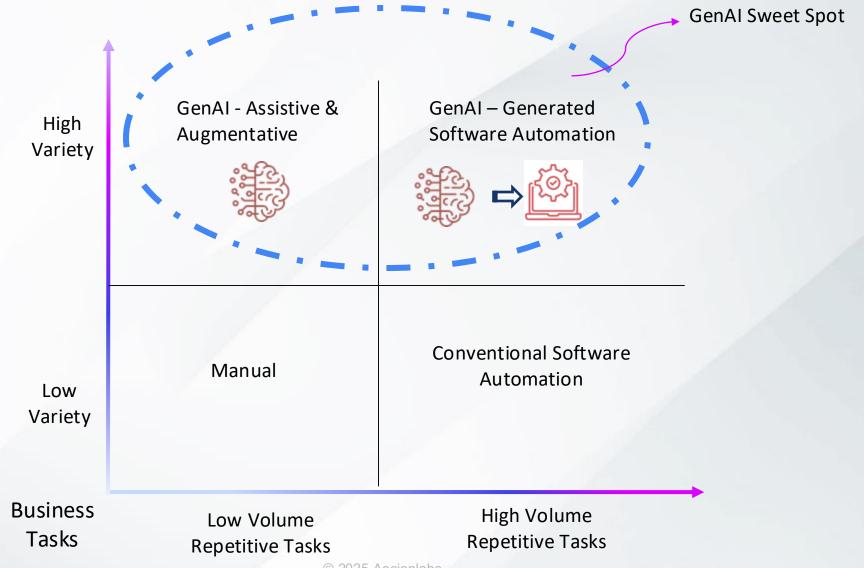

Respective cloud provider's solutions or open-source options like NVIDIA NeMo Guardrails can be used for implementations

POV on GenAl Applicability

Business Use Case Analysis Framework

Use Case Description

Objective is to utilize generative AI to assist in compiling, cross-referencing, and reviewing changes to complex documents

Business Value and Complexity

- Business Value High/Medium/Low: (improved productivity, saved cost etc.)
- Customer Value High/Medium/Low: (User experience, adoption etc.)
- Complexity High/Medium/Low: (complex workflows, business rule complexities, system integrations etc.)

Data Details					
	Internal Sources	External Sources			
	Data Sources - Internal - List of internal Data Sources	Data Sources - External - List of external data sources			

Necessary Data, Partners, Tools and Technology						
	Internal	External				
Partners	IT, Document Control, Risk Management	N/A				
Tools	Tools for integration.	N/A				
Other	N/A	N/A				

Why Do This? Expected Outcomes and Benefits

Write the outcomes you expect from this POC What are the outcomes you intend to achieve from this POC

Sponsor / Key Contacts

- Submitter Name:
- Sponsor: TBD
- Key Contacts (Function & IT): TBD

Approach. What is the plan?

1. Plan of how this development can be achieved.

Strategic Pathways for Generative AI Adoption Through KAPS

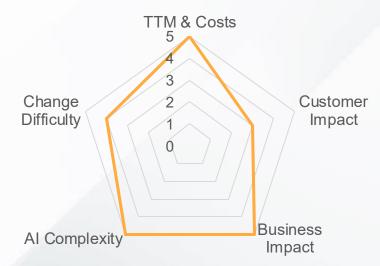

Knowledge - Low Hanging Fruits

Data – Quick Wins

<u>Systems – Transformative Programs</u>

<u>Process Automation – Strategic Investments</u>

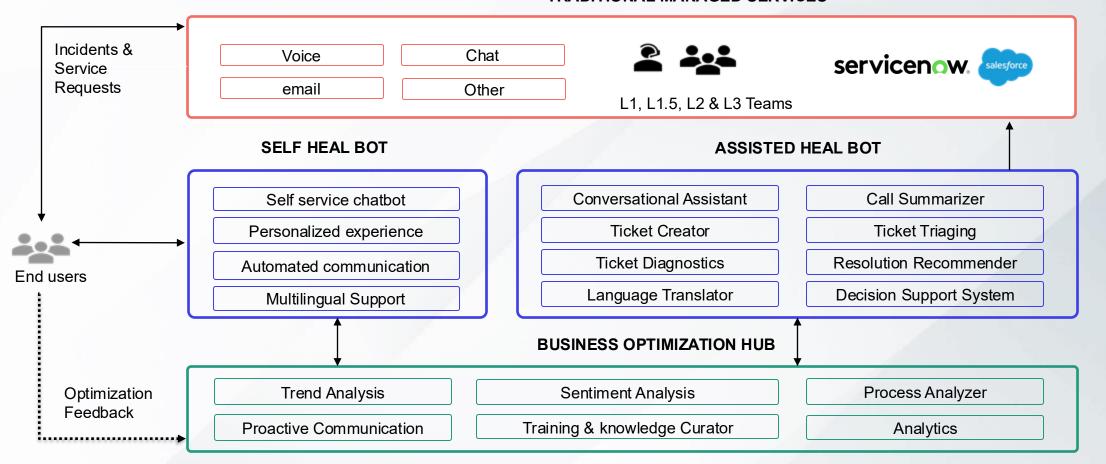

Our Gen Al Powered Solutions

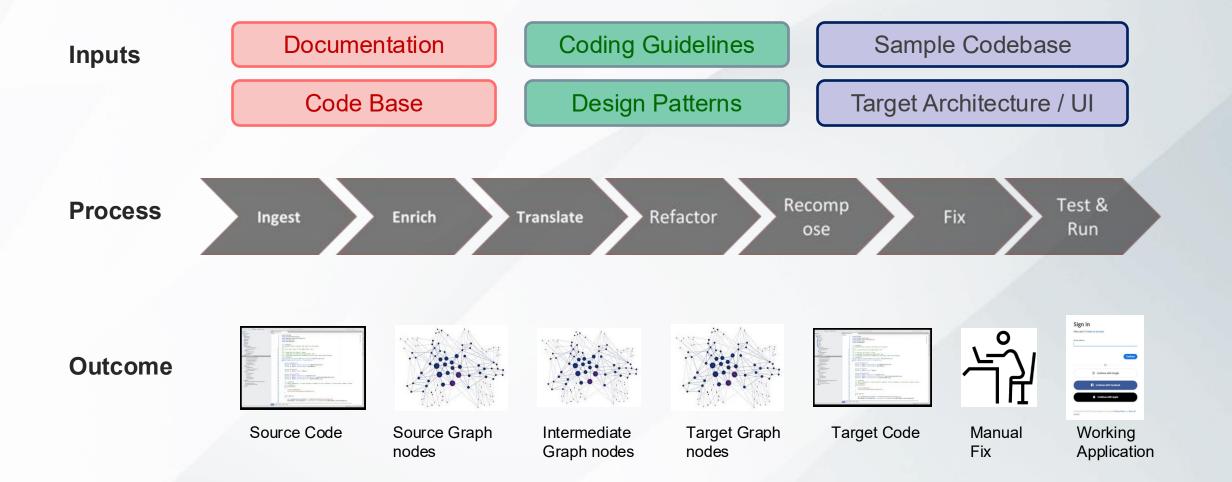

TRADITIONAL MANAGED SERVICES

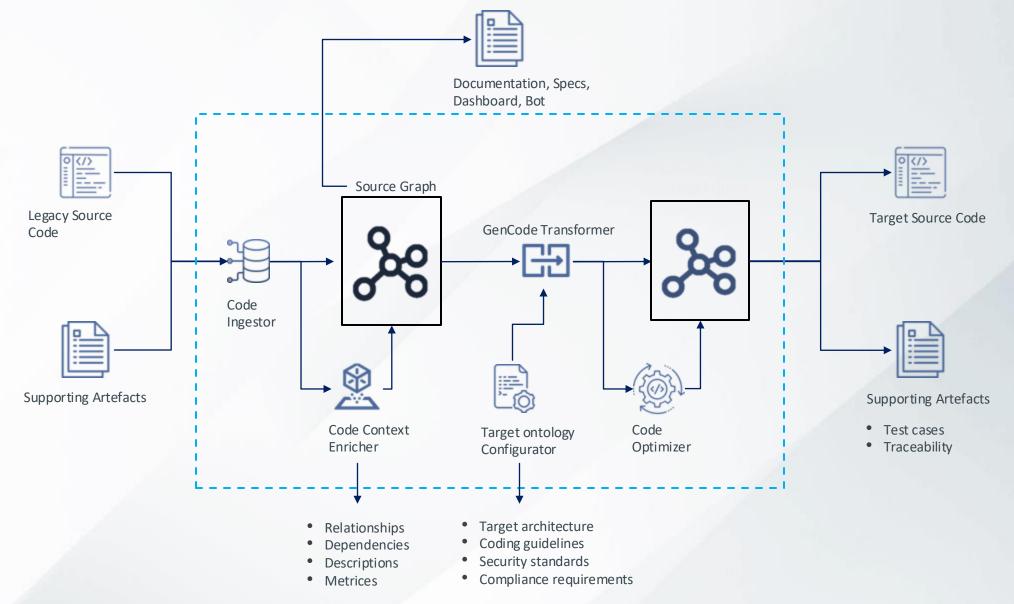

2. Legacy Migration Solution -Powered by ASIMOV

ASIMOV – Our Agentic Framework for Legacy Migration

3. Breeze AI - SDLC Transformation

Requirement Engineering

System Design

Development

Testing

Deployment

Maintenance & Support

Input Assets

- Requirements documents,
- JIRA, Confluence, Google Docs.
- Survey tools, email communication
- Design specifications
- Architectural details.
- UML tools, Collaboration tools.
- Code repositories, code reviews.
- GitHub, GitLab, Bitbucket.
- CI/CD tools.
- Test plans, test cases.
- Test management tools.
- Bug tracking tools
- Deployment plans, release notes.
- CI/CD tools
- Deployment automation tools.
- Support logs, incident reports.
- Ticketing systems, monitoring tools.
- Communication tools.

Context Hub

Derived Insights

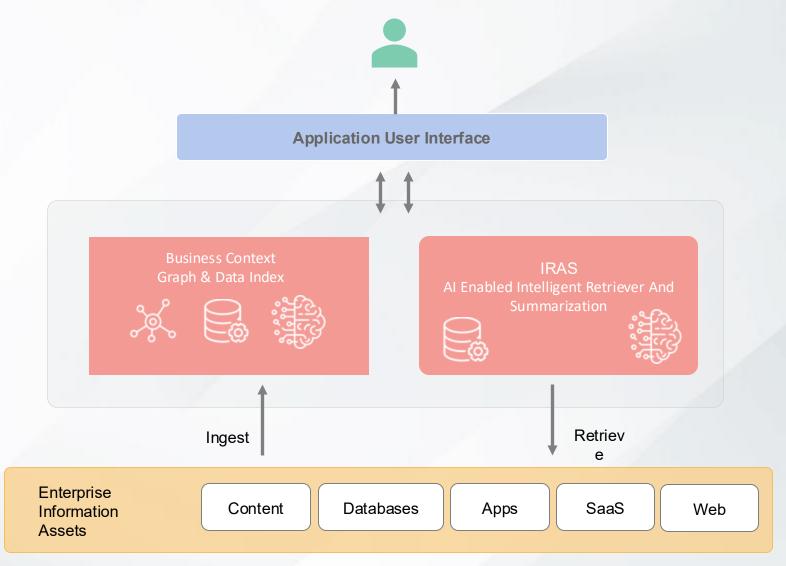

- Identify missing or conflicting requirements.
- Assess design adherence to requirements.
- Code quality assessment.
- Deployment frequency and success rates.
- Support process insights

Gen Al Output

- Assist in reviewing the input documents
- Stakeholder Communication summarization
- Validate design adherence to requirements.
- Validate design adherence with compliance
- Code review & optimization suggestions
- Unit Test Case Generation
- Test Case Automation Script Generation
- Test case / test data generation
- Bug / Issue -> code tracing
- Generation of deployment scripts
- Trace deployment issues back to code changes.
- Ticket / Issue summarization
- Real-Time ticket resolution assistance
- Ticket traceability

4. Enterprise Data Transformation With Al

© 2025 Accionlabs

5. Agent As A Service – Our Agentification Framework

As a service, we enable product Agentification through **non-invasive** implementation, by **building on existing system**, and by scaling agents incrementally **with minimal disruption**—guided by the **Model Context Protocol (MCP)** for seamless integration.

Product Architecture Today		Layers Of Agentic AI In Products		Primary Role Of Agent	
User Interface	→	Conversational Assistive Agents	→	Solves : Steep learning curve & user training challenges.	
Business Logic	→	Adaptive Onboarding Agents	→	Solves : Error-prone configurations & onboarding inefficiencies.	
Data/Analytics	→	Intelligent Insights Agents	→	Solves: Rigid, one-size-fits-all reporting.	
Workflow	→	Autonomous Cognitive Agents	→	Solves: Alert fatigue & missed critical actions.	
Integration/APIs	→	Process Orchestration Agents	-	Solves : Fragmented integrations & inefficient workflows.
